## IMAGING SERVICES

Because healthcare providers cannot see what's happening inside your body when you are ill or injured, they rely on high-tech imaging to help with their diagnosis. Each Penn Highlands Healthcare hospital uses state-of-the-art digital imaging equipment to take internal pictures of the body. These images are used to determine the location and nature of an injury or illness. And for convenience, X-ray and ultrasound services are provided in locations outside of the hospital in our outpatient clinics.

In addition to its diagnostic role, imaging can be used throughout a treatment program to measure the effectiveness of specific types of treatment. Typically, these procedures are used as part of the treatment plan by oncology, pulmonary, trauma and orthopedic specialists.

Penn Highlands Imaging Departments comply with all requirements of the American College of Radiology, the Pennsylvania Department of Environmental Protection and the U.S. Food and Drug Administration. Each of our technologists is registered by the American Registry of Radiologic Technologies and many earned specialty-level credentialing.
